Notes:

- For high-glide refrigerants, use dew point for unit sizing. Adjust evaporator pressure as needed to maintain discharge air temperatures.
- Evaporator temperatures listed above are for unlit shelves. Evaporator temperatures may need to be reduced for lit shelves or aftermarket display accessories.
- Baseline Evaporator Btuh based on parallel rack system, 1 Row LED canopy lighting (Zero Zone ChillBrite™), ECM electronic fan motors, 4 rows of tiered shelves, and Low sill height.
- For condensing units (non-rack system), multiply total Btuh rating by 1.08.
- Discharge air temperature is measured at the outlet of the honeycomb.
- Discharge air velocity is average velocity at peak of defrost.
- Amps are based on electrical nameplate values, watts are based on laboratory observations of actual energy use.

Case Performance Notes:

- Btuh load increases by approximately 120 Btuh/ft for aftermarket shelving/merchandising.
- Operating temperature and defrost set points may need to be adjusted for alternate shelving, store conditions, or packout.
- A minimum 20° evaporator is recommended without positive defrost.
