

# CHILLBRITE™ UNDER SHELF LIGHTING INSTALLATION INSTRUCTIONS

Instructions for installing under shelf lighting on a Zero Zone Reveal Merchandiser®.

## Instructions

1. Position the under shelf light on the bottom of the shelf with the cord towards the left side of the shelf (**See Figure 1**).
2. Attach the under shelf light to the shelf using the magnets that built into the light stick body (**See Figure 1**).

**Note:** The connector is equipped with a o-ring (**See Figure 2**). This o-ring may interfere with proper connection if the connector is inserted directly into the receptacle without adjustment.

3. After installing the shelf, insert the power cord into the nearest duct pocket under the shelf (**See Figure 3**).
4. Plug the connector into the receptacle, then rotate the connector 90° clockwise to properly seat the o-ring and ensure a secure connection. Ensure the tab ends in an up or down orientation to minimize wire strain.
5. Attach the cord to the shelf bracket. Slide and rotate the magnets on the cord as needed (**See Figure 3**). Tuck the slack wire neatly against the shelf or bracket.
