Notes:

- For high-glide refrigerants, use dew point for unit sizing. Adjust evaporator pressure as needed to maintain discharge air temperatures.
- Baseline evaporator Btu/h based on parallel rack system, LED lighting (Zero Zone ChillBrite® 4211), no-energy French-swing doors (Zero Zone CoolView® Ultra™), and ECM or SSC electronic fan motors.
- For condensing units (non-rack system), multiply total Btu/h rating by 1.04.
- Amps are based on electrical nameplate values. Watts are based on laboratory observations of actual energy use.
- 2 to 4-door (4' to 8') cases use one fan motor per door. 6-door (12') cases use five total fan motors.
- Door (Anti-Sweat) Option: no-energy = no-heat glass and no-heat rails.
- Individual risers for circuits of more than one case require refrigeration line sizing by Zero Zone.
